DETAILED ACTION

Election/Restrictions

1. Claims 3-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 8.
2. Applicant's election with traverse of claims 1 and 2 in Paper No. 8 is acknowledged. The traversal is on the ground(s) that the separate groups have the same special technical feature, the transparent or translucent resin. This is not found persuasive because the special technical features were defined by the examiner in the restriction requirement (i.e. group 1 disclose making a device with a roughened surface, group 2 disclose the method of dicing the substrate, group 3 disclose the use of a reflector and the translucent resin has a concave portion, group 4 disclose a device that uses bonding tape), and each grouping of claims has different special technical features it would be a burden on the examiner to search each and every special technical feature.

The requirement is still deemed proper and is therefore made FINAL.

Priority

3. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 4/24/00, 5/8/00, and 5/24/00. It is noted, however, that applicant has not filed a copy of these Japanese applications.

Information Disclosure Statement

4. The information disclosed fails to comply with 37 CFR 1.98(a)(1), which requires a list of all patents, publications, or other information submitted for consideration by the Office. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

5. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the roughened surface perpendicular to the substrate must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

6. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Side-emission type semiconductor light emitting device.

Claim Objections

7. Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Specifically claim 1 is a device claim and claim 2 defines how the device is formed, accordingly the presence of process limitations on product claims, which product does not otherwise patentably distinguish over prior art, cannot impart patentability to the product. In re Stephens 145 USPQ 656 (CCPA 1965).

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hironobu et al. (JP 5-315651). Hironobu et al. disclose the a substrate (2) with an electrode (3), an LED chip on the electrode (5), a transparent or translucent resin (8), Hironobu inherently discloses that the resin would have a roughened surface because

the chip is cut (diced). With regards to claim 2 Hironobu disclosed that the chips are cut (diced).
